

THE NEW STANDARD FOR SUPPLY CHAIN OPERATIONS

*Solving the gaps left by traditional PLM, ERP,
and your Legacy Tech Stack*

Business Model

British Columbia lifestyle brand that is all about restoring forests and making the highest quality products from eco-friendly materials. \$50M in annual revenue.

The ROI

An essential statistic for assessing a supply chain effectiveness is return on investment. In order to assess a supply chain effectiveness and decide whether it is worthwhile investing in, ROI is applied.

GRID is a method that aids in managing the critical path. The integration of several business divisions that generate a high volume of POs and have various business complexities onto one platform provides an organization-wide single source of truth.

Process Overview at a Glance

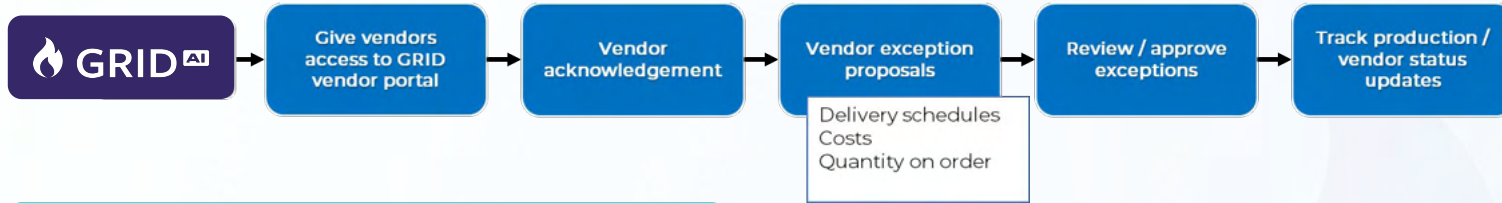

Product Development

PO Creation and Ingestion

PO Operations Management

Packaging List & Shipments Management

Shipments Reconciliation and Inventory Fulfilment

What made Customer happy about GRID:

- One platform that provides a single source of truth throughout the organisation integrates multiple business divisions driving enormous PO volumes with diverse business complexities.
- The GRID's real-time data and analytics support global sourcing of clothing, accessories, and materials as well as its efforts to increase margins and manage supply chain interruptions.
- Integration with Amazon Seller Central and DI Central to support B2B order fulfilment across China's manufacturing network and purchase order management.
- Using NetSuite and Centric together creates a single source of truth.
- 40+ subsidiary management with quick product development cycles. Quick and simple cost and purchase order management, vendor analysis, and optimisation. Dashboards are reports that offer rapid calls to action and decision-making based on predicted data.
